

# Perma-Line SERIES

## Description

Perma-Line is a cost-effective, permanent visual warning line system for roof edge protection and controlled access zones. Once in place, the Perma-Line remains intact until you want to move it. No drilling is necessary for installation, preserving the integrity of your roof. The Perma-Line System consists of powder coated/galvanized metal flags that are adhered to vinyl coated/galvanized aircraft cable. The flag assembly meets OSHA 6 ft spacing requirement. Our unique design allows the flags to pivot on the cable which allows for less wind resistance. The system exceeds OSHA regulations for warning line systems. Perma-Line is not a motion stopping device.

## Basic Use

The Perma-Line System can greatly reduce the cost of an entire roof installation by visually protecting the non-serviceable areas of your roof and creating controlled access zones.

## OSHA Compliance

Meets OSHA regulations.

- ▶ 29 CFR 1926.502

## Features

- ▶ Non-penetrating system
- ▶ When used in conjunction with SafetyRail 2000, it will reduce the costs of the fall protection project
- ▶ Exceeds OSHA regulations for warning line systems
- ▶ Powder Coat Yellow and Galvanized Finishes available

**The Perma-Line System can greatly reduce the cost of an entire roof's installation by visually protecting the non-serviceable areas of your roof.**
